

Tri-County Overdose Data Brief

Summer 2022

In 2021, nearly half of the state's overdose deaths occurred among tri-county residents.

Drug overdose deaths increased 24%; fentanyl 101%.

Youth ages 14-18 make up the smallest percentage (3%) of drug and fentanyl-related fatalities

People age 35-39 had the highest death rate from fentanyl at 19 per 100,000.

People ages 50-54 have the highest death rate from drug overdoses involving all drugs
